Orgues Létourneau was founded in Saint-Hyacinthe, Québec in 1979 and has since created and installed over 130 pipe organs around the world. The company is made up of a dedicated team of specialist builders that design, build, and restore pipe organs of all types and sizes for churches, concert halls, schools and private residences. Létourneau organs can be found today in Canada, the United States, England, Austria, New Zealand, and Australia. They are characterized by exquisite voicing and sound, sensitive key actions, and outstanding workmanship throughout.

**F**OUNDED IN 1979, Létourneau Pipe Organs is a leader known internationally for its excellence in all aspects of pipe organ design, construction, restoration and tonal finishing.

Each Létourneau instrument is crafted from raw materials to a robust standard and their workshops are among the best-equipped in North America for the construction of pipe organs. The company builds almost every part of their organs in their shops, including organ cases, wind chests, wind reservoirs, keyboards and consoles in a variety of styles and sizes. Importantly, Létourneau builds all of their organ pipes, wood or metal, to oversee every aspect of each stop, including its pipes' shape, scale and voicing.

Superior quality and ultimate durability are hallmarks of the company's work. One of their tenets is that every organ leaving the shop must improve on the one that

preceded it, whether it's a mechanism that has been refined or the construction of a particular stop has been improved. Further, the Létourneau team has established a reputation for harmonious collaboration and efficiency, whether working with an architect on the parameters for a new instrument or installing a new pipe organ in a church.

Restorations and rebuilds of existing instruments make up an important part of Létourneau's work. Each instrument is evaluated individually as to how to best respect its original builder and make the most judicious use of original materials while ensuring the organ will excel in its musical role. Thanks to Létourneau's experienced pipe makers and voicers, old pipework is quickly transformed to produce beautiful sonorities.

Létourneau organs, large or small, new or rebuilt, are noted for the clarity and warmth of their sound, their responsiveness from the console, and the elegance of their visual integration.
